R&D SOFTWARE INTERN

I work on multiple projects that are given from my supervisors' workload;

- TV application Web Interface ;
 - Create and developed Web UI and its backend that communicates with android application via Firebase
 - Used technologies were ReactJS(MaterialUI), NodeJS
- Compile TV software from Web Interface ;
 - Take TV software technique specs from UI such as country, language, TV Inch size
 - Send to backend then write those values to config files of TV software (using sed and awk from busybox to find pattern and write to its place) after that compile the TV software with edited values, realize the software is compiled notify the user and create a download link with necessary file
- Create a Docker image/container with given Dockerfile ;
 - Take specs of container or image (choose container OS, network options)
 - If the user has premade projects, take it that for setup with container/image
 - then deploy it with nodeJS(unzip, sed and awk to change docker config files, execute linux docker commands) backend (exec ,child_process)

ABOUT

Directing my career by focusing on the development areas of technology, and I constantly improve myself by making projects on new software technologies and system.
